

HARSHITH DESU

Application Security Engineer

desuharshith@gmail.com | +91 7893989626 | Hyderabad, Telangana, India | [Linkedin](#) | [Github](#)

PROFESSIONAL SUMMARY

Application Security Engineer with 2+ years of hands-on experience in Security Operations Center (SOC) functions, SIEM monitoring, threat detection, incident response, and security automation across enterprise environments. Proven ability to deliver large-scale security engagements for global organizations — including UBS, Marriott International, and Deloitte — encompassing anomaly detection, threat analytics, log analysis, vulnerability assessment, and DevSecOps implementation. Experienced with Microsoft Sentinel, Splunk, AWS/Azure cloud security, Active Directory, and Python/Bash scripting for security automation. Holds CompTIA Security+ certification with demonstrated alignment to Microsoft's Cloud Operations & Innovation mission.

CORE COMPETENCIES

Security Ops	SIEM Monitoring (Splunk / Microsoft Sentinel) · SOC L1/L2 · Threat Hunting · Incident Response · Anomaly Detection · MXDR · Log Analysis
Threat Analytics	SIEM Detection Engineering · MITRE ATT&CK · Kill Chain Analysis · IOC Analysis · Threat Modeling (STRIDE) · Security Event Correlation
IT Operations	Active Directory · Network Security · Zero Trust Architecture · IT Incident Management · On-Call DRI Support · Security Lifecycle Management
Cloud & Infra	AWS · Microsoft Azure · Cloud Security Posture · Infrastructure Security · Identity & Access Management (IAM)
DevSecOps	CI/CD Pipeline Security · Shift-Left Security · IaC Security · Checkmarx · SonarQube · Snyk · GitHub Actions
Automation	Python · Bash Scripting · Security Automation · Security Orchestration (SOAR)
Application Sec	SAST · DAST · SCA · API Security Testing · Secure Code Review · OWASP Top 10 · Penetration Testing
AI / ML Security	GenAI Threat Modeling · LLM Red Teaming · Prompt Injection Testing · MITRE ATLAS · OWASP LLM Top 10

WORK EXPERIENCE

Cyber Security Engineer (Security Operations)

Aug 2024 – Present

Deloitte USI | Hyderabad, India

- Led SOC L2 operations monitoring enterprise SIEM platforms (Microsoft Sentinel and Splunk), performing continuous threat hunting, anomaly detection, and log correlation across large-scale client environments including UBS and Marriott International.
- Operated on-call incident response rotation, triaging and investigating security incidents across the full IR lifecycle — triage, containment, eradication, recovery, and post-incident reporting — reducing mean time to investigate (MTTI) by 35%.
- Built AI-powered SOC automation workflows using CrewAI multi-agent framework integrated with SIEM APIs, automating Level 1 alert triage, log correlation, and playbook execution — freeing analysts for high-priority threat investigations.
- Designed and implemented Python and Bash-based security automation scripts to streamline vulnerability triage, evidence collection, and reporting across enterprise security assessment cycles.
- Conducted threat modeling for enterprise application designs using STRIDE and MITRE ATT&CK frameworks, proactively identifying security gaps in software development lifecycles (SDLC).
- Executed application security assessments (SAST, DAST, SCA) for enterprise clients, integrating Checkmarx, SonarQube, and Snyk into CI/CD pipelines to enable continuous shift-left security scanning.
- Performed API security testing and secure code reviews across RESTful and GraphQL APIs, identifying and driving remediation of authentication bypass, BOLA, and injection vulnerabilities.

- Delivered GenAI Threat Modeling engagements (MITRE ATLAS / OWASP LLM Top 10) and LLM Red Teaming against enterprise-deployed AI applications, identifying prompt injection and data exfiltration risks.
- Administered and enforced identity and access management (IAM) policies and access control reviews across cloud (AWS/Azure) environments in support of zero trust security principles.
- Collaborated with partner engineering and project management teams on datacenter and cloud security compliance initiatives, improving program documentation and security baseline standards.

Security Analyst Trainee

Jan 2024 – Jul 2024

SDI-Bhubaneswar | Bhubaneswar, India

- Completed advanced SOC operations training covering SIEM platform administration, incident analysis, threat detection, and enterprise-scale cybersecurity monitoring and response strategies.
- Performed real-time threat hunting and firewall log analysis to detect lateral movement, suspicious authentication events, and anomalous network activities indicative of active intrusions.
- Gained hands-on experience with MXDR solutions and security event correlation, proactively identifying and investigating security threats through alert correlation and log analysis.
- Participated in simulated incident response exercises covering the complete IR lifecycle: triage, escalation, containment, eradication, recovery, and post-incident reporting.
- Analyzed system and network logs to surface behavioral anomalies and potential indicators of compromise (IOCs), developing technical writeups for each identified threat event.

KEY PROJECTS

AI-Powered SOC Automation Platform | Python · CrewAI · LangChain · SIEM APIs · Security Orchestration

- Designed and built an autonomous threat detection and response system using CrewAI multi-agent framework, integrating SIEM alert feeds for automated Level 1 incident classification, triage, and playbook execution.
- Implemented AI agents for log correlation, threat intelligence enrichment, and LLM-based incident summary generation — significantly reducing analyst manual workload and mean time to investigate.
- Enabled automated anomaly detection and alert deduplication across high-volume SIEM feeds, improving SOC efficiency and reducing alert fatigue.

Enterprise Security Operations — SIEM Detection Engineering | Microsoft Sentinel · Splunk · KQL · Python · MITRE ATT&CK

- Developed custom SIEM detection rules and correlation queries (KQL / SPL) aligned to MITRE ATT&CK techniques, enabling proactive identification of lateral movement, privilege escalation, and exfiltration scenarios.
- Built automated threat hunting playbooks and anomaly detection workflows integrated with SIEM platforms, reducing mean time to detect (MTTD) across enterprise client environments.

DevSecOps Pipeline Security Implementation | Checkmarx · SonarQube · Snyk · GitHub Actions · Docker

- Designed and integrated a security-first CI/CD pipeline embedding SAST, SCA, and container image scanning into automated build workflows with security quality gates blocking critical/high severity findings.
- Documented security baselines, false positive suppression strategies, and developer remediation guides to accelerate adoption across engineering teams.

LLM Red Teaming & GenAI Security Assessment | MITRE ATLAS · OWASP LLM Top 10 · Python · Prompt Engineering

- Developed a comprehensive LLM red teaming methodology to assess generative AI applications for security vulnerabilities including prompt injection, jailbreaking, model extraction, and data exfiltration risks.
- Produced structured threat model reports identifying AI-specific attack surfaces, aligned to MITRE ATLAS and OWASP LLM Top 10 frameworks.

CERTIFICATIONS

- CompTIA Security+ (SY0-701) — CompTIA
- Certified Ethical Hacker (CEH) v12 — EC-Council
- Microsoft SC-200: Security Operations Analyst Associate (In Progress)
- Microsoft Certified: Azure Security Engineer Associate AZ-500

EDUCATION

Bachelor of Technology — Computer Science & Engineering

Jan 2020 – Apr 2024
